Regulated immunostimulatory effects of IL-12 promote activation of tumor-infiltrating lymphocytes to elicit a cytotoxic immune response against distant tumors.

- Localized production of IL-12 leads to enhanced antigen presentation and T-cell activation toward tumor-associated antigens, thereby systemically.
- T-cell activation toward tumor-associated antigens.
- Influx of cytokine CDS® Tol Tollisho with contralateral CDS® memory T-cells.

Clinical activity was observed in injected and non-injected lesions primarily at the predicted 160 mg dose.

- Safety
- Most Common (≥20% of Subjects) TEAEs
- Chills, Fatigue, and Pyrexia (35% each); Nausea (27%); Anorexia and Anemia (30% each).
- Most Common (≥20% of Subjects) Related TEAEs
- Chills and Pyrexia (35% each); Nausea (27%); Anorexia and Anemia (30% each).

4 Grades Related TEAEs
- Hypotension, Hypotension, Hypotension, Hypotension.
- Additional clinical data was collected for all patients related to study drug.
